Surveillance report

Surveillance generated by nf-ncov-voc for Gamma variant

Date

This report is generated on 2022-03-25 using 257885 number of genomes collected between 2020-02-25 and 2022-03-09

Pango Lineages

Pango Lineages in this report ['P.1', 'P.1.10', 'P.1.12', 'P.1.12.1', 'P.1.14', 'P.1.15', 'P.1.17', 'P.1.7']

Indicator

This table contains key indicators identified

Indicator	Sub-categories from POKAY	Mutations
Transmissibility between humans	transmissibility	p.D138Y, p.D614G, p.E484K, p.H655Y, p.L18F, p.N501Y, p.P26S, p.R190S, p.T20N
Infection Severity	ACE2 receptor binding affinity, viral load, outcome hazard ratio	p.D138Y, p.D614G, p.E484K, p.H655Y, p.K417T, p.L18F, p.L5F, p.N501Y, p.P26S, p.P681H, p.R190S, p.T1027I, p.T20N
Immunity after natural infection	convalescent plasma escape, reinfection, humoral response durability	p.D138Y, p.D614G, p.E484K, p.H655Y, p.K417T, p.L18F, p.N501Y, p.P26S, p.R190S, p.T1027I, p.T20N, p.V1176F
Vaccines	vaccine neutralization efficacy	p.D138Y, p.D614G, p.E484K, p.H655Y, p.K417T, p.L18F, p.N501Y, p.P26S, p.P681H, p.R190S, p.T1027I, p.T20N, p.V1176F
Monoclonal antibodies	monoclonal antibody serial passage escape, pharmaceutical effectiveness	p.E484K, p.K417T, p.N501Y, p.R246G
Diagnostics	clinical indicators, antigenic test failure, symptom prevalence	

Mutation Significance

This table contains key functional impacts of mutations identified

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Reference Allele	Alternate Allele	Alternate Frequency
p.R246G	monoclonal antibody serial passage escape	Escape mutation against Spike N terminal domain antigenic supersite i mAbs S2M28, S2X28	P.1.12.1, P.1.12	McCallum et al. (2021)	5	A	G	nan
p.L5F	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant showed a 1.1x decrease in binding (KD) relative to D614G.	P.1.7	Gong et al. (2021)	2	C	T	nan
p.L5F	convalescent plasma binding	No change in Spike binding (relative to D614G alone) by 5 plasma collected 8 months post-symptom-onset.	P.1.7	Gong et al. (2021)	2	C	T	nan
p.L5F	vaccinee plasma binding	1.23x increase in Spike binding (relative to D614G alone) by 5 plasma collected 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in previously non-seroconverted subjects. 1.1x decrease in Spike binding (relative to D614G alone) by 5 plasma collected 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in post-infection vaccinees.	P.1.7	Gong et al. (2021)	2	C	T	nan

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Reference Allele	Alternate Allele	Alternate Frequency
p.P26S	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant showed a 1.58x increase in binding (KD) relative to D614G.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Gong et al. (2021)	11385	C	T	nan
p.P26S	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant combination (representing P.1 aka Gamma) showed a 4.24x increase in binding (KD) relative to D614G.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Gong et al. (2021)	11385	C	T	nan
p.P26S	anthropozoonotic events	Unlike wild type or B.1.1.7, P.1 lineage virus was able to infect and replicate in common lab mouse strains, with high titer.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Montagutelli et al. (2021)	11385	C	T	nan
p.P26S	antibody epitope effects	B.1.1.248 variant constellation ablates Class 1 receptor-binding-motif targeting antibodies COV2-2050, 1B07. B.1.1.248 variant constellation ablates Class 3 N-terminal domain targeting antibody COV2-2676.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Chen et al. (2021)	11385	C	T	nan
p.P26S	antibody epitope effects	The neutralization titer of NTD-binding mAb159 was 133-fold reduced on P.1 compared to Victoria (extasciitildewild type), with only 64% neutralization at 10 g/mL. Residues 20, 18, and 138 form a cluster underlying the 245–259 loop, which inserts into a groove between the light and heavy chains of Fab 159. In addition, the N-terminal residues preceding residue 18 interact with the antibody and may be perturbed. Given that there is likely a single supersite ("i") for potent NTD-binding antibodies, the binding of many of these are likely affected. Using 20 potent (primaruly anti-RBD) antibodies, neutralization was measured by a focus reduction neutralization test (FRNT) and compared with neutralization of Victoria (extasciitildewild type) and variants B.1.1.7 and B.1.351. Compared to Victoria neutralization by the mAbs was significantly impacted by P.1, with 12/20 showing > 10-fold reduction in FRNT50 titer and a number showing complete knockout of activity. The results with P.1 showed a greater impact compared to B.1.1.7 but were, as expected, similar to those with B.1.351.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Dejnirattisai et al. (2021)	11385	C	T	nan

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Reference Allele	Alternate Allele	Alternate Frequency
p.P26S	antibody epitope effects	Amongst RBD-targeting Emergency Use Authorized monoclonal antibody treatments CB6, LY-CoV555 and REGN10933 show abrogated neutralization activity against the ten key point mutations in Spike in the P.1 lineage vs wildtype or WA-1, but REGN10987 activity remains strong. RBD-targeting monoclonal antibodies 2-15 and C121 show abrogated neutralization activity against the ten key point mutations in Spike in the P.1 lineage vs wildtype or WA-1. N terminal domain targeting monoclonal antibodies 5-7, 4-8, 4-18 and 2-17 have abrogated neutralization activity against the ten key point mutations in Spike in the P.1 lineage vs wildtype or WA-1.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Wang et al. (2021)	11385	C	T	nan
p.P26S	convalescent plasma binding	1.08x decrease in Spike binding (relative to D614G alone) by 5 plasma collected 8 months post-symptom-onset.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Gong et al. (2021)	11385	C	T	nan
p.P26S	convalescent plasma binding	This variant combination (representing P.1 aka Gamma) showed a 1.3x decrease in Spike binding (relative to D614G alone) by 5 plasma collected 8 months post-symptom-onset.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Gong et al. (2021)	11385	C	T	nan
p.P26S	convalescent plasma escape	B.1.1.248 variant constellation in 10 convalescent human sera extasciitilde1mo post infection had mild to moderate resistence against most samples, P	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Chen et al. (2021)	11385	C	T	nan
p.P26S	convalescent plasma escape	B.1.1.7 variant constellation two-tailed Wilcoxon matched-pairs signed-rank test against 10 convalescent sera P	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Chen et al. (2021)	11385	C	T	nan
p.P26S	convalescent plasma escape	VSV pseudotype P.1 showed 4.8-fold decrease in NT50 vs wild type in sera from 9 ICU patients undergoing treatment in Germany (pre-variant infections).	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Hoffman et al. (2021)	11385	C	T	nan
p.P26S	convalescent plasma escape	In sera from six patients collected 1 to 12 weeks post-infection with B.1, antibody titer in a microneutralization assay was on average 71.46 for P.1 virus. Compare to much stronger neutralization titers for B.1.1.7 (256) and wild type (456.1) in the same sera.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Luftig et al. (2021)	11385	C	T	nan
p.P26S	convalescent plasma escape	In 13 plasma collected extasciitilde1mo after B.1.1.7 infection (nursing home in Ticino, Switzerland), neutralization reduced to undetectable levels in many plasma for P.1 pseudotyped virus, as well as WT and other VOCs. [paper does not detail the P.1 variants used, using the most popular as a stand in]	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	McCallum et al. (2021)	11385	C	T	nan

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Reference Allele	Alternate Allele	Alternate Frequency
p.P26S	convalescent plasma escape	Neutralizing antibodies that were generated following a mild infection with SARS-CoV-2 B.1.128 were effective in vitro, and likely protective, against the SARS-CoV-2 P.1. variant in the majority of individuals based on 60 convalescent sera tested.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Mendes-Correa et al. (2021)	11385	C	T	nan
p.P26S	convalescent plasma escape	Loss of neutralizing activity (PsVNA50 assay) using 6 hyperimmune immunoglobulin preparations from convalescent plasma was seen against P.1 (3.5-fold). Neutralization against 10 convalescent plasma was slightly poorer (3.9-fold).	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Tang et al. (2021)	11385	C	T	nan
p.P26S	convalescent plasma escape	In convalescent sera one month or more post-infection in Spring 2020, an average 6.5x decrease in reciprocal ID50 value was observed ten key point mutations in Spike in the P.1 lineage vs wildtype. A 3.4x decrease against the full P.1 type vs WA-1 was observed, with better full P.1 ID50 reciprocal value compared to the 10-mutation model.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Wang et al. (2021)	11385	C	T	nan
p.P26S	pharmaceutical effectiveness	VSV pseudotype P.1 entry mediated by the S proteins of the P.1 variant was completely resistant to blocking by REGN10989 and Bamlanivimab. Cell fusion proficiency was slight impaired. Entry driven by the S proteins of the B.1.351 was partially resistant against Casirivimab.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Hoffman et al. (2021)	11385	C	T	nan
p.P26S	reinfection	After a 128 day interval, a patient in Sao Paulo State, Brazil re-infected with P.1 (first episode likely predates P.1 emergence). Both cases were fairly mild (difficulty breathing, tiredness, dizziness and fatigue).	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Malta Romano et al. (2021)	11385	C	T	nan
p.P26S	trafficking	extasciitilde6x cleavage of S2 relative to WA1 (D614G) wildtype by Gamma variant as measured by mass spectrometry of Vero-TMPRSS culture [no mutations directly at furin cleavage site, but H655Y is upstream] Compare to 4.5x or less for variants of concern with direct furin clevage site mutations.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Esclera et al. (2021)	11385	C	T	nan
p.P26S	trafficking	VSV pseudotype P.1 showed slight decrease in cell entry relative to wild type in 262T and 263T-ACE2 (kidney) cell lines. Cell fusion proficiency was slight impaired.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Hoffman et al. (2021)	11385	C	T	nan

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Reference Allele	Alternate Allele	Alternate Frequency
p.P26S	transmissibility	The relative transmissibility of P.1 estimated at the national level (Italy) varied according to the assumed degree of cross-protection granted by infection with other lineages and ranged from 1.12 (95%CI 1.03-1.23) in the case of complete immune evasion by P.1 to 1.39 (95%CI 1.26-1.56) in the case of complete cross-protection. PG: variant list has been abbreviated due to mixed K417 bases in this lineage, potential miscalls of deletions	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Stefanelli et al. (2021)	11385	C	T	nan
p.P26S	vaccine neutralization efficacy	Using P.1 defining mutations for Spike, observed 4x average decrease in neutralization efficiency (but still relevant titres) for sera from 10 BNT162b2 vaccinees 12 days after second dose, but only one relevant titre 12 days after first dose. Compares unfavorably to wild type or B.1.1.7 titres.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Alenquer et al. (2021)	11385	C	T	nan
p.P26S	vaccine neutralization efficacy	In human sera 8 weeks post-vaccination with INO-4800, a extasciitilde2-fold reduction in P.1 neutralization was observed.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Andrade et al. (2021)	11385	C	T	nan
p.P26S	vaccine neutralization efficacy	The neutralizing activity of vaccine was slightly lower against B.1.1.248 variant constellation in sera tested from most of the 15 patients with the BNT162b2 mRNA vaccine. (Fig. 4)	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Chen et al. (2021)	11385	C	T	nan
p.P26S	vaccine neutralization efficacy	Neutralization efficiency (ID50) against P.1 reduced 3.2x relative to D614G wildtype using pseudotyped VSV assay on 8 Moderna vaccinee sera one week post-booster.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Choi et al. (2021)	11385	C	T	nan
p.P26S	vaccine neutralization efficacy	ELISpot assays show T cell neutralization reduced by 16.6% in this B.1.1.248 pseudotype relative to wild type in 18-20 pooled patient samples post second mRNA vaccine dose, with no significant difference between Pfizer and Moderna cohorts. Reduction was stronger in the S1 subunit than S2 (separate peptide pools were used).	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Gallagher et al. (2021)	11385	C	T	nan
p.P26S	vaccine neutralization efficacy	Pseudotyped P.1 virus has reduced neutralization activity vs wild type: 6.7x (30 sera Pfizer median 9 days post 2nd dose) and 4.5x (35 sera Moderna median 18 days post 2nd dose). This was significant by ANOVA.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Garcia-Beltran et al. (2021)	11385	C	T	nan
p.P26S	vaccine neutralization efficacy	1.15x *increase* in neutralization (ID50) in sera 3 weeks after one dose of Pfizer/BioNTech BNT162b2 (up to 5 naive and post infection vaccinees)	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Gong et al. (2021)	11385	C	T	nan

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Reference Allele	Alternate Allele	Alternate Frequency
p.P26S	vaccine neutralization efficacy	Among 46,884 HCWs in Manaus, Brazil vaccinated with at least one dose of CoronaVac, a 0.50-fold reduction (adjusted vaccine effectiveness, 49.6%: 95% CI, 11.3 - 71.4) in the odds of symptomatic SARS-CoV-2 infection was observed during the period 14 days or more after receiving the first dose. Estimated vaccine effectiveness of at least one dose against any SARS-CoV-2 infection was 35.1% (95% CI, −6.6 - 60.5) in the same time period.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Hitchlings et al. (2021)	11385	C	T	nan
p.P26S	vaccine neutralization efficacy	VSV pseudotype P.1 showed 5.12-fold reduction in neutralization efficiency vs wild type in 15 Pfizer BNT162b2 vaccinee sera 13-15 days post second dose. Cell fusion proficiency was slight impaired.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Hoffman et al. (2021)	11385	C	T	nan
p.P26S	vaccine neutralization efficacy	Neutralizing antibody titers increased in previously infected vaccinees relative to uninfected vaccinees 4.3-fold against P.1 (contrast with 3.4 fold against original SARS-CoV-2).	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Leier et al. (2021)	11385	C	T	nan
p.P26S	vaccine neutralization efficacy	PBMCs of Pfizer/BioNTech BNT162b2 (n	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Tarke et al. (2021)	11385	C	T	nan
p.P26S	vaccine neutralization efficacy	In 12 Moderna vaccinee sera 15 days post second dose (43 days since first vaccination), an average 2.8x decrease in reciprocal ID50 value was observed ten key point mutations in Spike in the P.1 lineage vs wildtype. A 4.8x decrease against the full P.1 type vs WA-1 was observed, though overall with a higher ID50 reciprocal value. In 10 Pfizer vaccinee sera 7 days or more post second dose (28 days or more since first vaccination), an average 2.2x decrease in reciprocal ID50 value was observed ten key point mutations in Spike in the P.1 lineage vs wildtype. A 3.8x decrease against the full P.1 type vs WA-1 was observed, with similar variant ID50 reciprocal value.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Wang et al. (2021)	11385	C	T	nan
p.P26S	vaccinee plasma binding	1.23x decrease in Spike binding (relative to D614G alone) by 5 plasma collected 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in previously non-seroconverted subjects. 1.37x decrease in Spike binding (relative to D614G alone) by 5 plasma collected 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in post-infection vaccinees.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Gong et al. (2021)	11385	C	T	nan

p.L18F	antibody epitope effects	The neutralization titer of NTD-binding mAb159 was 133-fold reduced on P.1 compared to Victoria (extasciitildewild type), with only 64% neutralization at 10 g/mL. Residues 20, 18, and 138 form a cluster underlying the 245–259 loop, which inserts into a groove between the light and heavy chains of Fab 159. In addition, the N-terminal residues preceding residue 18 interact with the antibody and may be perturbed. Given that there is likely a single supersite ("i") for potent NTD-binding antibodies, the binding of many of these are likely affected. Using 20 potent (primaruly anti-RBD) antibodies, neutralization was measured by a focus reduction neutralization test (FRNT) and compared with neutralization of Victoria (extasciitildewild type) and variants B.1.1.7 and B.1.351. Compared to Victoria neutralization by the mAbs was significantly impacted by P.1, with 12/20 showing > 10-fold reduction in FRNT50 titer and a number showing complete knockout of activity. The results with P.1 showed a greater impact compared to B.1.1.7 but were, as expected, similar to those with B.1.351.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Dejnirattisai et al. (2021)	11385	C	T	nan
p.L18F	antibody epitope effects	Massive reduction in S2L28 monoclonal antibody EC50 (i.e. ablated recognition), within antigenic supersite "i", but no effect on other mAbs within that supersite	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	McCallum et al. (2021)	11385	C	T	nan
p.L18F	antibody epitope effects	Ablates neutralization by N-terminal-domain-targeting mAbs 4-19. Impairs neutralization by N-terminal-domain-targeting mAbs 4A8 and 2-17.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Wang et al. (2021)	11385	C	T	nan
p.L18F	antibody epitope effects	Amongst RBD-targeting Emergency Use Authorized monoclonal antibody treatments CB6, LY-CoV555 and REGN10933 show abrogated neutralization activity against the ten key point mutations in Spike in the P.1 lineage vs wildtype or WA-1, but REGN10987 activity remains strong. RBD-targeting monoclonal antibodies 2-15 and C121 show abrogated neutralization activity against the ten key point mutations in Spike in the P.1 lineage vs wildtype or WA-1. N terminal domain targeting monoclonal antibodies 5-7, 4-8, 4-18 and 2-17 have abrogated neutralization activity against the ten key point mutations in Spike in the P.1 lineage vs wildtype or WA-1. p.L18F	outcome hazard ratio	In the Parana state of Brazil, patients aged 20-29 years experienced a tripling of their case fatality rate (CFR), from 0.04% to 0.13%, while those aged 30-39, 40-49, 50-59 experienced approximate CFR doubling comparing February to January in 2021. Notably, the observed CFR increase coincided with the second consecutive month of declining number of diagnosed SARS-CoV-2 cases. Taken together, these preliminary findings suggest significant increases in CFR in young and middle-aged adults after identification of a novel SARS-CoV-2 strain circulating in Brazil. [this is somewhat indirect evidence that assume greatly increasing proportion of P.1 cases in March (70%) compared to February, but the first official ID of P.1 in Parana state (Feb 16th) may be due to testing procedures rather than actual prevalence]	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Santos de Oliviera et al. (2021)	11385	C	T	nan
p.L18F	pharmaceutical effectiveness	VSV pseudotype P.1 entry mediated by the S proteins of the P.1 variant was completely resistant to blocking by REGN10989 and Bamlanivimab. Cell fusion proficiency was slight impaired. Entry driven by the S proteins of the B.1.351 was partially resistant against Casirivimab. p.D614G	trafficking	extasciitilde12x more infectivity than D614G alone in HEK293T-ACE2 cells 48h post-transduction (extasciitildeadditive effects of 501 and 484).	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Kuzmina et al. (2021)	11385	A	G	nan
p.D614G	trafficking	9x more infectivity than D614G alone in HEK293T-ACE2 cells 48h post-transduction.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Kuzmina et al. (2021)	11389	A	G	nan
p.D614G	trafficking	Among S variants tested, the D614G mutant shows the highest cell entry (extasciitilde3.5x wild type), as supported by structural and binding analyses.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Ozono et al. (2020)	11385	A	G	nan
p.D614G	trafficking	We report here pseudoviruses carrying SG614 enter ACE2-expressing cells more efficiently than wild type (extasciitilde9-fold). This increased entry correlates with less S1-domain shedding and higher S-protein incorporation into the virion. D614G does not alter S-protein binding to ACE2 or neutralization sensitivity of pseudoviruses. Thus, D614G may increase infectivity by assembling more functional S protein into the virion.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Zhang et l. (2020)	11385	A	G	nan

p.D614G	vaccine neutralization efficacy	Using a lentivirus virus pseudotyped with D614G Spike, sera from vaccinated individuals who received the second dose (9–11 days post-second dose of Pfizer) exhibited a robust neutralizing potential, with a mean NT50 value of 99,000. This was an average of a 2-fold increase, relative to sera drawn from the individuals who received one dose of vaccination—mean NT50 dilution of 51,300. Importantly, a 6-fold increase in mean NT50 dilution was obtained when sera from the first vaccination dose was compared to convalescent sera from cohort with severe disease (NT50 51,000 vs 8,700) 21 to 63 days post-onset.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Kuzmina et al. (2021)	11385	A	G	nan
p.D614G	vaccine neutralization efficacy	This variant showed only minor in Pfizer sera (one or two dose) neutralization efficiency vs D614G (using lentivirus pseudotype).	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Kuzmina et al. (2021)	11385	A	G	nan
p.D614G	vaccine neutralization efficacy	This variant showed >5x decrease in Pfizer sera (3 weeks post-first dose: n	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Kuzmina et al. (2021)	11385	A	G	nan
p.D614G	vaccine neutralization efficacy	This variant showed no change in Pfizer sera (one or two dose) neutralization efficiency vs D614G (using lentivirus pseudotype).	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Kuzmina et al. (2021)	11385	A	G	nan
p.D614G	vaccine neutralization efficacy	Neutralizing antibody titers increased in previously infected vaccinees relative to uninfected vaccinees 4.3-fold against P.1 (contrast with 3.4 fold against original SARS-CoV-2).	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Leier et al. (2021)	11385	A	G	nan
p.D614G	vaccine neutralization efficacy	Pseudotyped viruses for B.1.618 was 2.7-fold resistant to neutralization by 6 BNT162b2 vaccine sera 28 days post-booster compared to wild type - a finding that was similar to that of the 3.4-fold resistance of the South Africa B.1.351 variant using the same assay. Neutralization by 3 Moderna vaccine sera 28 days post-booster was 3-fold resistant (vs. 2.2-fold for B.1.351). The resistance of B.1.618 was caused by the E484K mutation, based on results from viruses pseudotyped for individual variants within B.1.618.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Tada et al. (2021)	11385	A	G	nan

p.D614G	vaccine neutralization efficacy	In 12 Moderna vaccinee sera 15 days post second dose (43 days since first vaccination), an average 2.8x decrease in reciprocal ID50 value was observed ten key point mutations in Spike in the P.1 lineage vs wildtype. A 4.8x decrease against the full P.1 type vs WA-1 was observed, though overall with a higher ID50 reciprocal value. In 10 Pfizer vaccinee sera 7 days or more post second dose (28 days or more since first vaccination), an average 2.2x decrease in reciprocal ID50 value was observed ten key point mutations in Spike in the P.1 lineage vs wildtype. A 3.8x decrease against the full P.1 type vs WA-1 was observed, with similar variant ID50 reciprocal value.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Wang et al. (2021)	11385	A	G	nan
p.D614G	vaccine neutralization efficacy	No significant change in virus neutralzation by 18 Pfizer two dose vaccinee sera compared to B.1.1.7. [results without including the used mutation A27S likely generalizable, as this is not a lineage defining mutation]	P.1.7	Zuckerman et al. (2021)	2	A	G	nan
p.D614G	vaccinee plasma binding	1.37x decrease in Spike binding (relative to D614G alone) by 5 plasma collected 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in previously non-seroconverted subjects. 1.56x decrease in Spike binding (relative to D614G alone) by 5 plasma collected 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in post-infection vaccinees. p.N501Y	ACE2 receptor binding affinity	In the case of VOC B.1.1.7+E484K, the addition of the E484K mutation to N501Y further increased the affinity, to extasciitilde15 fold higher than WT RBD (KD extasciitilde5 nM), by further increasing the k(on) as measured by surface plasmon resonance. Because the higher k(on) could result in mass transfer limiting binding, we confirmed that the kinetic measurement for this variant was not substantially affected by varying levels of immobilization.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Barton et al. (2021)	11376	A	T	nan
p.N501Y	ACE2 receptor binding affinity	The affinity of the P.1 RBD variants for ACE2 increased by 5.3 fold as measured by surface plasmon resonance relative to wild type RBD by increasing the k(on) and decreasing the k(off) rate constants.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Barton et al. (2021)	11376	A	T	nan
p.N501Y	ACE2 receptor binding affinity	This combination showed extasciitilde3x increase binding to ACE2 vs wild type, about half that of the B.1.1.7 lineage, suggesting that the K417N mutation is slightly detrimental to ACE2 binding, probably as a result of disrupting the salt bridge formed with ACE2 residue D30	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Collier et al. (2021)	11376	A	T	nan
p.N501Y	ACE2 receptor binding affinity	The KD for the pseudotyped P.1-ACE2 interaction is 4.8 nM, showing that binding to P.1 is essentially indistinguishable from B.1.351 (4.0 nM), which binds with extasciitilde19x greater affinity that wild type.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Dejnirattisai et al. (2021)	11376	A	T	nan
p.N501Y	ACE2 receptor binding affinity	The most frequent RBM mutation N501Y (165,519 instances) makes defective the atypical N-glycosylation sequon NGV 501-503, becoming a key RBM position for the interaction with hACE2-binding hotspot 353.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Gamez et al. (2021)	11376	A	T	nan
p.N501Y	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant showed a 2.52x increase in binding (KD) relative to D614G, mostly due to decreased in "off-rate" a.k.a. dissociation rate (Kdis). Compare to full Spike variant complements for major lineages containing this variant subset: 5.43x (B.1.1.7 aka Alpha), 3.56x (B.1.351 aka Beta), 4.24x (P.1 aka Gamma).	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Gong et al. (2021)	11376	A	T	nan
p.N501Y	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant combination (representing P.1 aka Gamma) showed a 4.24x increase in binding (KD) relative to D614G.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Gong et al. (2021)	11376	A	T	nan

p.N501Y	ACE2 receptor binding affinity	RBD containing the N501Y mutation results in 9-fold stronger binding to the hACE2 receptor than wild type RBD. The E484K mutation does not significantly influence the affinity for the receptor, while K417N attenuates affinity. As a result, RBD from B.1.351 containing all three mutations binds 3-fold stronger to hACE2 than wild type RBD but 3-fold weaker than N501Y.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Laffeber et al. (2021)	11376	A	T	nan
p.N501Y	ACE2 receptor binding affinity	Reported 10-fold increase in ACE2 binding vs wild-type (Kd	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Liu et al. (2021)	11376	A	T	nan
p.N501Y	ACE2 receptor binding affinity	Studying the key covariants in lineage of concern 501Y.V2, observed about 2-fold increase in ACE2 binding vs wildtype, but greatly decreased mAb binding, suggesting evolutionary optimum tension between immune evasion and ACE2 binding affinity as the N501Y variant alone has 10x increase in affinity but no effect on tested mAb binding.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Liu et al. (2021)	11376	A	T	nan
p.N501Y	ACE2 receptor binding affinity	extasciitilde4-fold increase in binding affinity vs wild type.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Motozono et al. (2021)	11376	A	T	nan
p.N501Y	ACE2 receptor binding affinity	Using Microscale Thermopheresis, this variant binds ACE2 at nearly two-fold greater affinity than the original SARS-COV-2 RBD (203.7 nM vs 402.5 nM).	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Ramanathan et al. (2021)	11376	A	T	nan
p.N501Y	ACE2 receptor binding affinity	Using Mircoscale Thermopheresis, the B.1.351 variant harboring three mutations, binds ACE2 at nearly five-fold greater affinity than the original SARS-COV-2 RBD (Kd 87.6, vs 402.5 nM).	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Ramanathan et al. (2021)	11376	A	T	nan
p.N501Y	ACE2 receptor binding affinity	In silico methods (PyMOL and PDBePISA) involving mutagenesis (N501Y mutation) and interface analysis focusing on the Spike RDB-ACE2 interaction showed that the SARS-CoV-2 N501Y mutant (lineage B.1.1.7) establishes a more significant number of interactions relating to the mutant residue Y501 (Spike RDB) with residues Y41 and K353 (ACE2). This finding shows that the increased infectivity of SARS-CoV-2 lineage B.1.1.7 is associated with the interaction force between the Spike RBD Y501 mutant residue with the ACE2 receptor, which in this strain is increased.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Santos and Passos (2021)	11376	A	T	nan
p.N501Y	ACE2 receptor binding affinity	Experimentally, ACE2 binding affinity increased 0.24 fold	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Starr et al. (2020)	11376	A	T	nan

p.N501Y	outcome hazard ratio	In the Parana state of Brazil, patients aged 20-29 years experienced a tripling of their case fatality rate (CFR), from 0.04% to 0.13%, while those aged 30-39, 40-49, 50-59 experienced approximate CFR doubling comparing February to January in 2021. Notably, the observed CFR increase coincided with the second consecutive month of declining number of diagnosed SARS-CoV-2 cases. Taken together, these preliminary findings suggest significant increases in CFR in young and middle-aged adults after identification of a novel SARS-CoV-2 strain circulating in Brazil. [this is somewhat indirect evidence that assume greatly increasing proportion of P.1 cases in March (70%) compared to February, but the first official ID of P.1 in Parana state (Feb 16th) may be due to testing procedures rather than actual prevalence]	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Santos de Oliviera et al. p.T20N	antibody epitope effects	The neutralization titer of NTD-binding mAb159 was 133-fold reduced on P.1 compared to Victoria (extasciitildewild type), with only 64% neutralization at 10 g/mL. Residues 20, 18, and 138 form a cluster underlying the 245–259 loop, which inserts into a groove between the light and heavy chains of Fab 159. In addition, the N-terminal residues preceding residue 18 interact with the antibody and may be perturbed. Given that there is likely a single supersite ("i") for potent NTD-binding antibodies, the binding of many of these are likely affected. Using 20 potent (primaruly anti-RBD) antibodies, neutralization was measured by a focus reduction neutralization test (FRNT) and compared with neutralization of Victoria (extasciitildewild type) and variants B.1.1.7 and B.1.351. Compared to Victoria neutralization by the mAbs was significantly impacted by P.1, with 12/20 showing > 10-fold reduction in FRNT50 titer and a number showing complete knockout of activity. The results with P.1 showed a greater impact compared to B.1.1.7 but were, as expected, similar to those with B.1.351.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Dejnirattisai et al. (2021)	11381	C	A	nan
p.T20N	antibody epitope effects	Amongst RBD-targeting Emergency Use Authorized monoclonal antibody treatments CB6, LY-CoV555 and REGN10933 show abrogated neutralization activity against the ten key point mutations in Spike in the P.1 lineage vs wildtype or WA-1, but REGN10987 activity remains strong. RBD-targeting monoclonal antibodies 2-15 and C121 show abrogated neutralization activity against the ten key point mutations in Spike in the P.1 lineage vs wildtype or WA-1. N terminal domain targeting monoclonal antibodies 5-7, 4-8, 4-18 and 2-17 have abrogated neutralization activity against the ten key point mutations in Spike in the P.1 lineage vs wildtype or WA-1. p.K417T	outcome hazard ratio	In the Parana state of Brazil, patients aged 20-29 years experienced a tripling of their case fatality rate (CFR), from 0.04% to 0.13%, while those aged 30-39, 40-49, 50-59 experienced approximate CFR doubling comparing February to January in 2021. Notably, the observed CFR increase coincided with the second consecutive month of declining number of diagnosed SARS-CoV-2 cases. Taken together, these preliminary findings suggest significant increases in CFR in young and middle-aged adults after identification of a novel SARS-CoV-2 strain circulating in Brazil. [this is somewhat indirect evidence that assume greatly increasing proportion of P.1 cases in March (70%) compared to February, but the first official ID of P.1 in Parana state (Feb 16th) may be due to testing procedures rather than actual prevalence]	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Santos de Oliviera et al. p.D138Y	antibody epitope effects	B.1.1.248 variant constellation ablates Class 1 receptor-binding-motif targeting antibodies COV2-2050, 1B07. B.1.1.248 variant constellation ablates Class 3 N-terminal domain targeting antibody COV2-2676.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Chen et al. (2021)	11385	G	T	nan
p.D138Y	antibody epitope effects	The neutralization titer of NTD-binding mAb159 was 133-fold reduced on P.1 compared to Victoria (extasciitildewild type), with only 64% neutralization at 10 g/mL. Residues 20, 18, and 138 form a cluster underlying the 245–259 loop, which inserts into a groove between the light and heavy chains of Fab 159. In addition, the N-terminal residues preceding residue 18 interact with the antibody and may be perturbed. Given that there is likely a single supersite ("i") for potent NTD-binding antibodies, the binding of many of these are likely affected. Using 20 potent (primaruly anti-RBD) antibodies, neutralization was measured by a focus reduction neutralization test (FRNT) and compared with neutralization of Victoria (extasciitildewild type) and variants B.1.1.7 and B.1.351. Compared to Victoria neutralization by the mAbs was significantly impacted by P.1, with 12/20 showing > 10-fold reduction in FRNT50 titer and a number showing complete knockout of activity. The results with P.1 showed a greater impact compared to B.1.1.7 but were, as expected, similar to those with B.1.351.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Dejnirattisai et al. (2021)	11385	G	T	nan

p.P681H	trafficking	This mutation in the first base of the furin clevage site maintains the RXXR recognition motif, and is presumed to enhance cleavage based on the removal of a proline-directed phosphotase recognition site at S680. In a homologuous site in Infectious Bronchitis Virus (IBV, Gammacoronaviruses), abolition of S680 phosphorylation improves furin cleavage (and presumably cell entry).	P.1.7	Maaroufi (2021)	2	C	A	nan
p.P681H	trafficking	Lentiviral pseudotyped with this individual mutation from B.1.1.7 was tested on ACE2.293T cells. Luciferase activity was measured two days postinfection, showing NO statistically significant infection rate change amongst the cells, suggesting that furin cleavage typically used for cell entry is not affected by this change one amino acid upstream of the RXXR recognition pattern.	P.1.7	Tada et al. (2021)	2	C	A	nan
p.P681H	vaccine neutralization efficacy	No significant change in virus neutralzation by 18 Pfizer two dose vaccinee sera compared to B.1.1.7. [results without including the used mutation A27S likely generalizable, as this is not a lineage defining mutation]	P.1.7	Zuckerman et al. (2021)	2	C	A	nan
p.P681H	vaccinee plasma binding	1.14x decrease in Spike binding (relative to D614G alone) by 5 plasma collected 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in previously non-seroconverted subjects. 1.11x decrease in Spike binding (relative to D614G alone) by 5 plasma collected 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in post-infection vaccinees.	P.1.7	Gong et al. (2021)	2	C	A	nan
p.P681H	virion structure	The Ratio of S2 (processed Spike) to full length Spike is higher for this mutation, due to a drop in the full length Spike measured, suggesting that this mutation compensates for decreased Spike production by improved proteolytic processing.	P.1.7	Tada et al. (2021)	2	C	A	nan
p.R190S	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant showed a 1.82x increase in binding (KD) relative to D614G.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Gong et al. (2021)	11358	G	T	nan
p.R190S	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant combination (representing P.1 aka Gamma) showed a 4.24x increase in binding (KD) relative to D614G. p.R190S	antibody epitope effects	B.1.1.248 variant constellation ablates Class 1 receptor-binding-motif targeting antibodies COV2-2050, 1B07. B.1.1.248 variant constellation ablates Class 3 N-terminal domain targeting antibody COV2-2676.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Chen et al. (2021)	11358	G	T	nan
p.R190S	antibody epitope effects	The neutralization titer of NTD-binding mAb159 was 133-fold reduced on P.1 compared to Victoria (extasciitildewild type), with only 64% neutralization at 10 g/mL. Residues 20, 18, and 138 form a cluster underlying the 245–259 loop, which inserts into a groove between the light and heavy chains of Fab 159. In addition, the N-terminal residues preceding residue 18 interact with the antibody and may be perturbed. Given that there is likely a single supersite ("i") for potent NTD-binding antibodies, the binding of many of these are likely affected. Using 20 potent (primaruly anti-RBD) antibodies, neutralization was measured by a focus reduction neutralization test (FRNT) and compared with neutralization of Victoria (extasciitildewild type) and variants B.1.1.7 and B.1.351. Compared to Victoria neutralization by the mAbs was significantly impacted by P.1, with 12/20 showing > 10-fold reduction in FRNT50 titer and a number showing complete knockout of activity. The results with P.1 showed a greater impact compared to B.1.1.7 but were, as expected, similar to those with B.1.351.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Dejnirattisai et al. (2021)	11358	G	T	nan
p.R190S	antibody epitope effects	Amongst RBD-targeting Emergency Use Authorized monoclonal antibody treatments CB6, LY-CoV555 and REGN10933 show abrogated neutralization activity against the ten key point mutations in Spike in the P.1 lineage vs wildtype or WA-1, but REGN10987 activity remains strong. RBD-targeting monoclonal antibodies 2-15 and C121 show abrogated neutralization activity against the ten key point mutations in Spike in the P.1 lineage vs wildtype or WA-1. N terminal domain targeting monoclonal antibodies 5-7, 4-8, 4-18 and 2-17 have abrogated neutralization activity against the ten key point mutations in Spike in the P.1 lineage vs wildtype or WA-1. p.H655Y	outcome hazard ratio	In the Parana state of Brazil, patients aged 20-29 years experienced a tripling of their case fatality rate (CFR), from 0.04% to 0.13%, while those aged 30-39, 40-49, 50-59 experienced approximate CFR doubling comparing February to January in 2021. Notably, the observed CFR increase coincided with the second consecutive month of declining number of diagnosed SARS-CoV-2 cases. Taken together, these preliminary findings suggest significant increases in CFR in young and middle-aged adults after identification of a novel SARS-CoV-2 strain circulating in Brazil. [this is somewhat indirect evidence that assume greatly increasing proportion of P.1 cases in March (70%) compared to February, but the first official ID of P.1 in Parana state (Feb 16th) may be due to testing procedures rather than actual prevalence]	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Santos de Oliviera et al. p.E484K	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant combination (representing P.1 aka Gamma) showed a 4.24x increase in binding (KD) relative to D614G.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Gong et al. (2021)	11384	G	A	nan
p.E484K	ACE2 receptor binding affinity	RBD containing the N501Y mutation results in 9-fold stronger binding to the hACE2 receptor than wild type RBD. The E484K mutation does not significantly influence the affinity for the receptor, while K417N attenuates affinity. As a result, RBD from B.1.351 containing all three mutations binds 3-fold stronger to hACE2 than wild type RBD but 3-fold weaker than N501Y.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Laffeber et al. (2021)	11384	G	A	nan
p.E484K	ACE2 receptor binding affinity	Studying the key covariants in lineage of concern 501Y.V2, observed about 2-fold increase in ACE2 binding vs wildtype, but greatly decreased mAb binding, suggesting evolutionary optimum tension between immune evasion and ACE2 binding affinity as the N501Y variant alone has 10x increase in affinity but no effect on tested mAb binding.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Liu et al. (2021)	11384	G	A	nan
p.E484K	ACE2 receptor binding affinity	Using Mircoscale Thermopheresis, the B.1.351 variant harboring three mutations, binds ACE2 at nearly five-fold greater affinity than the original SARS-COV-2 RBD (Kd 87.6, vs 402.5 nM).	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Ramanathan et al. (2021)	11384	G	A	nan
p.E484K	ACE2 receptor binding affinity	Experimentally, ACE2 binding affinity increased 0.06 fold	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Starr et al. (2020)	11384	G	A	nan
p.E484K	ACE2 receptor binding affinity	Reported moderate increase in affinity compared to wild-type RBD on the cell surface (Kd	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Tian et al. (2021)	11384	G	A	nan
p.E484K	ACE2 receptor binding affinity	Reported slight increase in affinity compared to wild-type RBD on the cell surface (Kd	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Tian et al. (2021)	11384	G	A	nan
p.E484K	ACE2 receptor binding affinity	The affinity of ACE2 for this mutation combination was twice as high as for wild type. Having in mind that the affinity of SARS-CoV-2 for ACE2 is only 4-fold higher compared to SARS-CoV-1, this factor of 2 is expected to be biologically significant.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Vogel et al. (2021)	11384	G	A	nan

p.E484K	outcome hazard ratio	In the Parana state of Brazil, patients aged 20-29 years experienced a tripling of their case fatality rate (CFR), from 0.04% to 0.13%, while those aged 30-39, 40-49, 50-59 experienced approximate CFR doubling comparing February to January in 2021. Notably, the observed CFR increase coincided with the second consecutive month of declining number of diagnosed SARS-CoV-2 cases. Taken together, these preliminary findings suggest significant increases in CFR in young and middle-aged adults after identification of a novel SARS-CoV-2 strain circulating in Brazil. [this is somewhat indirect evidence that assume greatly increasing proportion of P.1 cases in March (70%) compared to February, but the first official ID of P.1 in Parana state (Feb 16th) may be due to testing procedures rather than actual prevalence]	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Santos de Oliviera et al. p.E484K	vaccinee plasma binding	This variant combination (representing P.1 aka Gamma) showed a 1.14x decrease in Spike binding (relative to D614G alone) by 5 plasma 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in previously non-seroconverted subjects. 1.27x decrease in Spike binding (relative to D614G alone) by 5 plasma collected 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in post-infection vaccinees.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Gong et al. (2021)	11384	G	A	nan
p.E484K	virion structure	Estimated free energy change (ddG) for this variant is -0.6 kcal/mol (i.e. destabilizing relative to wild type)	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Spratt et al. (2021)	11384	G	A	nan
p.E484K	virion structure	CryoEM reveals the P.1 trimer to adopt exclusively a conformation in which one of the receptor-binding domains is in the “up” position.	P.1.14, P.1.10, P.1.17, P.1, P.1.15, P.1.7, P.1.12.1, P.1.12	Wang et al. (2021)	11384	G	A	nan

The results here are in whole or part based upon data hosted at the Canadian VirusSeq Data Portal: https://virusseq-dataportal.ca/.We wish to acknowledge the following organisations/laboratories for contributing data to the Portal: Canadian Public Health Laboratory Network (CPHLN), CanCOGGeN VirusSeq and the list of labs available at https://virusseq-dataportal.ca/acknowledgements)
