

Surveillance report

Surveillance generated by nf-ncov-voc for Omicron variant

Date

This report is generated on 2022-01-21 using 164953 number of genomes collected between 2020-02-25 and 2021-12-29

Pango Lineages

Pango Lineages in this report ['B.1.1.529', 'BA.1', 'BA.2']

Indicator

This table contains key indicators identified

Indicator	Sub-categories from POKAY	Mutations
Transmissibility between humans	transmissibility	p.N440K
Infection Severity	ACE2 receptor binding affinity, viral load, outcome hazard ratio	p.A701V, p.D614G, p.G339D, p.H655Y, p.H69del, p.K417N, p.N440K, p.N501Y, p.P681H, p.T95I, p.V70del
Immunity after natural infection	convalescent plasma escape, reinfection, humoral response durability	p.E484A, p.H69del, p.K417N, p.N501Y, p.P681H, p.Q493R, p.V70del
Vaccines	vaccine neutralization efficacy	p.D614G, p.K417N, p.N501Y, p.P681H
Monoclonal antibodies	monoclonal antibody serial passage escape, pharmaceutical effectiveness	p.E484A, p.G142D, p.K417N, p.N440K, p.N501Y, p.Q493R, p.R158G, p.R346K, p.S373P
Diagnostics	clinical indicators, antigenic test failure, symptom prevalence	

Mutation Significance

This table contains key functional impacts of mutations identified

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.K417N	ACE2 receptor binding affinity	The K417N mutation decreased the affinity extasciitilde4 fold, mainly by decreasing the k(on) but also by increasing the k(off) as measured by surface plasmon resonance.	B.1.1.529, BA.1, BA.2	Barton et al. (2021)	750	T	1.0
p.K417N	ACE2 receptor binding affinity	This combination showed extasciitilde3x increase binding to ACE2 vs wild type, about half that of the B.1.1.7 lineage, suggesting that the K417N mutation is slightly detrimental to ACE2 binding, probably as a result of disrupting the salt bridge formed with ACE2 residue D30	B.1.1.529, BA.1, BA.2	Collier et al. (2021)	750	T	1.0
p.K417N	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant showed a 1.5x decrease in binding (KD) relative to D614G.	B.1.1.529, BA.1, BA.2	Gong et al. (2021)	750	T	1.0

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.K417N	ACE2 receptor binding affinity	RBD containing the N501Y mutation results in 9-fold stronger binding to the hACE2 receptor than wild type RBD. The E484K mutation does not significantly influence the affinity for the receptor, while K417N attenuates affinity. As a result, RBD from B.1.351 containing all three mutations binds 3-fold stronger to hACE2 than wild type RBD but 3-fold weaker than N501Y.	B.1.1.529, BA.1, BA.2	Laffebber et al. (2021)	750	T	1.0
p.K417N	ACE2 receptor binding affinity	Studying the key co-variants in lineage of concern 501Y.V2, observed about 2-fold increase in ACE2 binding vs wildtype, but greatly decreased mAb binding, suggesting evolutionary optimum tension between immune evasion and ACE2 binding affinity as the N501Y variant alone has 10x increase in affinity but no effect on tested mAb binding.	B.1.1.529, BA.1, BA.2	Liu et al. (2021)	750	T	1.0
p.K417N	ACE2 receptor binding affinity	Using Microscale Thermophoresis, the B.1.351 variant harboring three mutations, binds ACE2 at nearly five-fold greater affinity than the original SARS-COV-2 RBD (Kd 87.6, vs 402.5 nM).	B.1.1.529, BA.1, BA.2	Ramanathan et al. (2021)	750	T	1.0
p.K417N	ACE2 receptor binding affinity	Reported 3-fold decrease in affinity compared to wild-type RBD on the cell surface (Kd	B.1.1.529, BA.1, BA.2	Tian et al. (2021)	750	T	1.0
p.K417N	ACE2 receptor binding affinity	Reported slight increase in affinity compared to wild-type RBD on the cell surface (Kd	B.1.1.529, BA.1, BA.2	Tian et al. (2021)	750	T	1.0
p.K417N	ACE2 receptor binding affinity	The affinity of ACE2 for this mutation combination was twice as high as for wild type. Having in mind that the affinity of SARS-CoV-2 for ACE2 is only 4-fold higher compared to SARS-CoV-1, this factor of 2 is expected to be biologically significant.	B.1.1.529, BA.1, BA.2	Vogel et al. (2021)	750	T	1.0
p.K417N	antibody epitope effects	>20% (ELISA significance threshold) drop in antibody binding (ELISA) by this variant against IgG1 monoclonal antibody ab1.	B.1.1.529, BA.1, BA.2	Sun et al. (2021)	750	T	1.0
p.K417N	antibody epitope effects	5 antibodies tested were less potent against K417N by ten-fold or more (class 1 mAbs)	B.1.1.529, BA.1, BA.2	Wang et al. (2021)	750	T	1.0
p.K417N	antibody epitope effects	Pseudotyped virus model ablates binding by RBD-directed mAbs CB6 and 910-30 (targeting the inner side of the RBD). Pseudotyped virus model impairs binding by RBD-directed mAbs 4-20 and REGN10933.	B.1.1.529, BA.1, BA.2	Wang et al. (2021)	750	T	1.0
p.K417N	convalescent plasma binding	2.16x increase in Spike binding (relative to D614G alone) by 5 plasma collected 8 months post-symptom-onset.	B.1.1.529, BA.1, BA.2	Gong et al. (2021)	750	T	1.0

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.K417N	convalescent plasma escape	The 501Y.V2 to first wave IC50 ratio ranged from 6 to 200-fold. Averaging across all 7 participant convalescent sera highlighted the dramatic decrease in sensitivity to neutralization of authentic 501Y.V2 variants. PG: I'm purposefully ignoring D614G and A701V as contributors	B.1.1.529, BA.1, BA.2	Cele et al. (2021)	750	T	1.0
p.K417N	convalescent plasma escape	In 19 convalescent human sera extasciitilde post infection, Two-tailed Wilcoxon matched-pairs signed-rank test shows mild resistance P	B.1.1.529, BA.1, BA.2	Chen et al. (2021)	750	T	1.0
p.K417N	convalescent plasma escape	27% of 44 early pandemic exposure convalescent plasma/sera lose all activity against a RBD triple mutant pseudovirus (RBD mutants of the 501Y.V2 "South African" lineage), while only 23% retained high titres	B.1.1.529, BA.1, BA.2	Wibmer et al. (2021)	750	T	1.0
p.K417N	convalescent plasma escape	Nearly half (21 of 44, 48%) of early pandemic exposure convalescent plasma/sera failed to neutralize the 501Y.V2 ("South African") lineage pseudovirus construct Only 3 of 44 convascent sera (those with the highest titer, which correlated directly with initial infection severity) had high neutralization against this 501Y.V2 PG: note that lineage variant R246I was excluded from the text in reference to these sera assays, not sure if that was an oversight.	B.1.1.529, BA.1, BA.2	Wibmer et al. (2021)	750	T	1.0
p.K417N	gene expression increase	Experimentally, Spike gene expression increased 0.1 fold	B.1.1.529, BA.1, BA.2	Starr et al. (2020)	750	T	1.0
p.K417N	monoclonal antibody serial passage escape	Escape mutation against monoclonal antibody LY-CoV016	B.1.1.529, BA.1, BA.2	Starr et al. (2021)	750	T	1.0
p.K417N	monoclonal antibody serial passage escape	In vitro selection against class I (Spike 'up' conformation) monoclonal antibody C682, and to a lesser extent C614 and C660	B.1.1.529, BA.1, BA.2	Wang et al. (2021)	750	T	1.0
p.K417N	pharmaceutical effectiveness	COR-101 lost extasciitilde6x binding against this isolated mutation. Estesevimab lost extasciitilde100x binding against this isolated mutation.	B.1.1.529, BA.1, BA.2	Engelhart et al. (2021)	750	T	1.0
p.K417N	pharmaceutical effectiveness	Tixagevimab, Regdanimab and COR-101 display reduced binding affinity to virus pseudotyped as RBD from B.1.351.	B.1.1.529, BA.1, BA.2	Engelhart et al. (2021)	750	T	1.0

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.K417N	pharmaceutical effectiveness	COR-101 lost extasciitilde20x binding against this double mutation. Estesevimab lost extasciitilde16x binding against this double mutation. Regdanvimab lost extasciitilde6x binding against this double mutation. M396 lost extasciitilde10x binding against this double mutation.	B.1.1.529, BA.1, BA.2	Engelhart et al. (2021)	750	T	1.0
p.K417N	pharmaceutical effectiveness	This mutated version of RBD completely abolishes the binding to a therapeutic antibody, Bamlanivimab, in vitro.	B.1.1.529, BA.1, BA.2	Liu et al. (2021)	750	T	1.0
p.K417N	trafficking	extasciitilde2x more infectivity than D614G alone in HEK293T-ACE2 cells 48h post-transduction.	B.1.1.529, BA.1, BA.2	Kuzmina et al. (2021)	750	T	1.0
p.K417N	trafficking	extasciitilde9x more infectivity than D614G alone in HEK293T-ACE2 cells 48h post-transduction (no synergy as level approx. that of N501Y alone).	B.1.1.529, BA.1, BA.2	Kuzmina et al. (2021)	750	T	1.0
p.K417N	trafficking	Lentiviral pseudotyped with this individual mutation from B.1.351 was tested on ACE2.293T cells. Luciferase activity was measured two days postinfection, showing mild decrease in infection rate amongst the cells, suggesting that this mutation does not contributing to cell entry fitness.	B.1.1.529, BA.1, BA.2	Tada et al. (2021)	750	T	1.0
p.K417N	vaccine neutralization efficacy	This variant showed only minor in Pfizer sera (one or two dose) neutralization efficiency vs D614G (using lentivirus pseudotype).	B.1.1.529, BA.1, BA.2	Kuzmina et al. (2021)	750	T	1.0
p.K417N	vaccine neutralization efficacy	This variant showed >5x decrease in Pfizer sera (3 weeks post-first dose: n	B.1.1.529, BA.1, BA.2	Kuzmina et al. (2021)	750	T	1.0
p.K417N	vaccinee plasma binding	1.76x increase in Spike binding (relative to D614G alone) by 5 plasma collected 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in previously non-seroconverted subjects. 1.75x decrease in Spike binding (relative to D614G alone) by 5 plasma collected 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in post-infection vaccinees.	B.1.1.529, BA.1, BA.2	Gong et al. (2021)	750	T	1.0
p.K417N	virion structure	Estimated free energy change (ddG) for this variant is -0.86 kcal/mol (i.e. destabilizing relative to wild type)	B.1.1.529, BA.1, BA.2	Spratt et al. (2021)	750	T	1.0
p.S373P	monoclonal antibody serial passage escape	Reduce affinity for mildly cross-reactive CR3022 (2003 pandemic SARS monoclonal antibody cross-reactive to SARS-CoV-2)	B.1.1.529, BA.1, BA.2	Long et al. (2020)	862	C	1.0

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.Q493R	antibody epitope effects	Ablates binding by class 2 mAbs such as C144 that directly interfere with ACE2 binding, but clonal somatic mutations of memory B cells at 6.2 months (evolving humoral immune response) show pronounced increase in binding to the variant.	B.1.1.529, BA.1, BA.2	Gaebler et al. (2021)	862	G	1.0
p.Q493R	antibody epitope effects	Massive reduction in binding efficiency vs wild type for mAbs CB6/LY-CoV16 and LY-CoV555.	B.1.1.529, BA.1, BA.2	Rappazzo et al. (2021)	862	G	1.0
p.Q493R	antibody epitope effects	Somewhat resistant to some class 1 (Spike 'up') antibodies tested. Mix of non- to strongly resistant in class 2 antibodies tested.	B.1.1.529, BA.1, BA.2	Wang et al. (2021)	862	G	1.0
p.Q493R	convalescent plasma escape	Escape mutant found after in passage in plasma pool of 26 convalescents mean 1.5 post symptom onset.	B.1.1.529, BA.1, BA.2	Schmidt et al. (2021)	862	G	1.0
p.Q493R	monoclonal antibody serial passage escape	The engineered mutation cause 10-fold or more increase in the disassociation constant with C144, C002 and C121 monoclonal antibodies vs. wild type Spike protein RBD domain AAs.	B.1.1.529, BA.1, BA.2	Barnes et al. (2020)	862	G	1.0
p.Q493R	monoclonal antibody serial passage escape	Escape mutation against monoclonal antibody LY-CoV555 (antibody that forms the basis for Eli Lilly's bamlanivimab)	B.1.1.529, BA.1, BA.2	Starr et al. (2021)	862	G	1.0
p.Q493R	monoclonal antibody serial passage escape	Class 2 mAb C627 modestly selected for the emergence of this mutation in vitro.	B.1.1.529, BA.1, BA.2	Wang et al. (2021)	862	G	1.0
p.Q493R	monoclonal antibody serial passage escape	Strong positive selection (up to 37% of supernatant sequences) after two rounds of C135 monoclonal antibody passage, overall 76% switch away from Q493 to K or R	B.1.1.529, BA.1, BA.2	Weisblum et al. (2020)	862	G	1.0
p.R158G	monoclonal antibody serial passage escape	Escape mutation against Spike N terminal domain antigenic supersite i mAb S2X28	B.1.1.529	McCallum et al. (2021)	1	G	1.0
p.D614G	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant showed essentially no change in binding (KD) relative to D614G.	BA.1	Gong et al. (2021)	860	G	1.0
p.D614G	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant showed a 1.21x increase in binding (KD) relative to D614G.	B.1.1.529, BA.1, BA.2	Gong et al. (2021)	862	G	1.0
p.D614G	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant showed a 1.51x increase in binding (KD) relative to D614G, mostly due to decreased in "off-rate" a.k.a. dissociation rate (Kdis).	BA.1	Gong et al. (2021)	860	G	1.0
p.D614G	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant showed a 1.5x decrease in binding (KD) relative to D614G.	B.1.1.529, BA.1, BA.2	Gong et al. (2021)	862	G	1.0

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.D614G	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant showed a 2.52x increase in binding (KD) relative to D614G, mostly due to decreased in "off-rate" a.k.a. dissociation rate (Kdis). Compare to full Spike variant complements for major lineages containing this variant subset: 5.43x (B.1.1.7 aka Alpha), 3.56x (B.1.351 aka Beta), 4.24x (P.1 aka Gamma).	B.1.1.529, BA.1, BA.2	Gong et al. (2021)	862	G	1.0
p.D614G	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant showed a 1.23x decrease in binding (KD) relative to D614G.	B.1.1.529, BA.1	Gong et al. (2021)	861	G	1.0
p.D614G	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant showed a 1.33x decrease in binding (KD) relative to D614G.	B.1.1.529, BA.1	Gong et al. (2021)	861	G	1.0
p.D614G	ACE2 receptor binding affinity	In four cell lines (including 293T-hACE2 cells), this mutation combination increases infectivity vs D614G alone	B.1.1.529, BA.1, BA.2	Li et al. (2020)	862	G	1.0
p.D614G	convalescent plasma binding	1.11x decrease in Spike binding (relative to D614G alone) by 5 plasma collected 8 months post-symptom-onset.	BA.1	Gong et al. (2021)	860	G	1.0
p.D614G	convalescent plasma binding	1.48x increase in Spike binding (relative to D614G alone) by 5 plasma collected 8 months post-symptom-onset.	B.1.1.529, BA.1, BA.2	Gong et al. (2021)	862	G	1.0
p.D614G	convalescent plasma binding	1.33x increase in Spike binding (relative to D614G alone) by 5 plasma collected 8 months post-symptom-onset.	BA.1	Gong et al. (2021)	860	G	1.0
p.D614G	convalescent plasma binding	2.16x increase in Spike binding (relative to D614G alone) by 5 plasma collected 8 months post-symptom-onset.	B.1.1.529, BA.1, BA.2	Gong et al. (2021)	862	G	1.0
p.D614G	convalescent plasma binding	1.65x increase in Spike binding (relative to D614G alone) by 5 plasma collected 8 months post-symptom-onset.	B.1.1.529, BA.1, BA.2	Gong et al. (2021)	862	G	1.0
p.D614G	convalescent plasma binding	1.26x increase in Spike binding (relative to D614G alone) by 5 plasma collected 8 months post-symptom-onset.	B.1.1.529, BA.1	Gong et al. (2021)	861	G	1.0
p.D614G	convalescent plasma binding	No change in Spike binding (relative to D614G alone) by 5 plasma collected 8 months post-symptom-onset.	B.1.1.529, BA.1	Gong et al. (2021)	861	G	1.0
p.D614G	immunosuppression variant emergence	Studying 94 COVID-19 extended infection cases with genomics April 1 to October 17, 2020, one case developed 23 mutations in a 19 day period, including this combination in Spike.	B.1.1.529, BA.1, BA.2	Landis et al. (2021)	862	G	1.0

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.D614G	reinfection	A 47yo Indian male was reinfected with B.1.36 lineage virus in September 2020 after infection with genetically distinct B.1.36 virus in July, with negative PCR tests in between. While the first episode was asymptomatic, the second included fever, cough, and malaise. The second case additionally contained stopgain ORF3a:E261*	B.1.1.529, BA.1, BA.2	Rani et al. (2021)	862	G	1.0
p.D614G	syncytium formation	Slight increase in Vero cell-cell membrane fusion assay under infection with VSV pseudotyped virus.	B.1.1.529, BA.1, BA.2	Kim et al. (2021)	862	G	1.0
p.D614G	syncytium formation	Slight increase in Vero cell-cell membrane fusion assay under infection with VSV pseudotyped virus relative to wild type, no change relative to D614G.	B.1.1.529, BA.1, BA.2	Kim et al. (2021)	862	G	1.0
p.D614G	tissue specific neutralization	The nasal mucosa of Pfizer vaccinees with time course collection was evaluated against VSV pseudotypes: results (only one nasal swab from different previously infected vaccinee neutralizing at weeks 3 and 6 against B.1.1.7 and D614G) suggest that vaccinees probably do not elicit an early humoral response detectable at mucosal surfaces even though sera neutralization was observed. They strengthen the hypothesis that some vaccines may not protect against viral acquisition and infection of the oral-nasal region, but may prevent severe disease associated with viral dissemination in the lower respiratory tract.	B.1.1.529, BA.1, BA.2	Planas et al. (2021)	862	G	1.0
p.D614G	trafficking	Circulating variant shown in vitro to not have major defects or enhancement of cell surface protein trafficking (i.e. Spike cleavage or fusion required for cell entry)	B.1.1.529, BA.1, BA.2	Barrett et al. (2021)	862	G	1.0
p.D614G	trafficking	The increased transduction with Spike D614G ranged from 1.3- to 2.4-fold in Caco-2 and Calu-3 cells expressing endogenous ACE2 and from 1.5- to 7.7-fold in A549ACE2 and Huh7.5ACE2 over-expressing ACE2. Although there is minimal difference in ACE2 receptor binding between the D614 and G614 Spike variants, the G614 variant is more resistant to proteolytic cleavage, suggesting a possible mechanism for the increased transduction.	B.1.1.529, BA.1, BA.2	Daniloski et al. (2021)	862	G	1.0
p.D614G	trafficking	No change in infectivity (24h) relative to D614G alone in Caco-2 cells, Vero or Calu-3.	B.1.1.529, BA.1, BA.2	Kim et al. (2021)	862	G	1.0

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.D614G	trafficking	extasciitilde4x more efficient S2 domain cleavage compared to wild type in Caco-2 cells, mid-range of three cell line tested (Vero and Calu-3).	B.1.1.529, BA.1, BA.2	Kim et al. (2021)	862	G	1.0
p.D614G	trafficking	More efficient infectivity (24h) compared to wild type, in Caco-2 cells extasciitilde9x, Vero extasciitilde8x, and Calu-3 extasciitilde8x. Compare to wild type at extasciitilde5x across cell types.	B.1.1.529, BA.1, BA.2	Kim et al. (2021)	862	G	1.0
p.D614G	trafficking	extasciitilde4x more efficient S2 domain cleavage compared to wild type, no change relative to D614G alone in Caco-2 cells, mid-range of three cell line tested (Vero and Calu-3).	B.1.1.529, BA.1, BA.2	Kim et al. (2021)	862	G	1.0
p.D614G	trafficking	extasciitilde2x more infectivity than D614G alone in HEK293T-ACE2 cells 48h post-transduction.	B.1.1.529, BA.1, BA.2	Kuzmina et al. (2021)	862	G	1.0
p.D614G	trafficking	extasciitilde9x more infectivity than D614G alone in HEK293T-ACE2 cells 48h post-transduction (no synergy as level approx. that of N501Y alone).	B.1.1.529, BA.1, BA.2	Kuzmina et al. (2021)	862	G	1.0
p.D614G	trafficking	9x more infectivity than D614G alone in HEK293T-ACE2 cells 48h post-transduction.	B.1.1.529, BA.1, BA.2	Kuzmina et al. (2021)	863	G	1.0
p.D614G	trafficking	Among S variants tested, the D614G mutant shows the highest cell entry (extasciitilde3.5x wild type), as supported by structural and binding analyses.	B.1.1.529, BA.1, BA.2	Ozono et al. (2020)	862	G	1.0
p.D614G	trafficking	We report here pseudoviruses carrying SG614 enter ACE2-expressing cells more efficiently than wild type (extasciitilde9-fold). This increased entry correlates with less S1-domain shedding and higher S-protein incorporation into the virion. D614G does not alter S-protein binding to ACE2 or neutralization sensitivity of pseudoviruses. Thus, D614G may increase infectivity by assembling more functional S protein into the virion.	B.1.1.529, BA.1, BA.2	Zhang et al. (2020)	862	G	1.0
p.D614G	vaccine neutralization efficacy	Pseudotyped D614G virus has reduced neutralization activity vs wild type: 1.2x (37 sera Pfizer median 9 days post 2nd dose, 37 sera Moderna median 18 days post 2nd dose). This was NOT significant by ANOVA.	B.1.1.529, BA.1, BA.2	Garcia-Beltran et al. (2021)	862	G	1.0

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.D614G	vaccine neutralization efficacy	Using a lentivirus virus pseudotyped with D614G Spike, sera from vaccinated individuals who received the second dose (9–11 days post-second dose of Pfizer) exhibited a robust neutralizing potential, with a mean NT50 value of 99,000. This was an average of a 2-fold increase, relative to sera drawn from the individuals who received one dose of vaccination—mean NT50 dilution of 51,300. Importantly, a 6-fold increase in mean NT50 dilution was obtained when sera from the first vaccination dose was compared to convalescent sera from cohort with severe disease (NT50 51,000 vs 8,700) 21 to 63 days post-onset. p.D614G	virion structure	Estimated free energy change (ddG) for this variant is 2.5 kcal/mol (i.e. stabilizing relative to wild type)	B.1.1.529, BA.1, BA.2	Spratt et al. (2021)	862	G	1.0
p.D614G	virion structure	Negative stain EM shows increased proportion of "one-up" trimer conformation of Spike proteins on the surface of virions, where the up conformation is presumed to be more likely to bind ACE2.	B.1.1.529, BA.1, BA.2	Weissman et al. (2020)	862	G	1.0
p.D614G	virion structure	CryoEM shows increased proportion of "one-up" trimer conformation of Spike proteins on the surface of virions, where the up conformation is presumed to be more likely to bind ACE2.	B.1.1.529, BA.1, BA.2	Yurkovetskiy et al. (2020)	862	G	1.0
p.D614G	virion structure	Based on pseudotyped virus experiments, D614G may increase infectivity by assembling more functional S protein into the virion.	B.1.1.529, BA.1, BA.2	Zhang et al. (2020)	862	G	1.0
p.N501Y	ACE2 receptor binding affinity	The N501Y mutation had the biggest effect on ACE2 affinity of any VOC mutation tested, increasing the affinity ~ 10 fold to KD ~ 7 nM, by increasing the k_{on} ~ 1.8 fold and decreasing the k_{off} by ~ 7 fold as measured by surface plasmon resonance.	B.1.1.529, BA.1, BA.2	Barton et al. (2021)	862	T	1.0
p.N501Y	ACE2 receptor binding affinity	This combination showed ~ 3 fold increase binding to ACE2 vs wild type, about half that of the B.1.1.7 lineage, suggesting that the K417N mutation is slightly detrimental to ACE2 binding, probably as a result of disrupting the salt bridge formed with ACE2 residue D30	B.1.1.529, BA.1, BA.2	Collier et al. (2021)	862	T	1.0
p.N501Y	ACE2 receptor binding affinity	The most frequent RBM mutation N501Y (165,519 instances) makes defective the atypical N-glycosylation sequon NGV 501-503, becoming a key RBM position for the interaction with hACE2-binding hotspot 353.	B.1.1.529, BA.1, BA.2	Gamez et al. (2021)	862	T	1.0

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.N501Y	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant showed a 2.52x increase in binding (KD) relative to D614G, mostly due to decreased in "off-rate" a.k.a. dissociation rate (Kdis). Compare to full Spike variant complements for major lineages containing this variant subset: 5.43x (B.1.1.7 aka Alpha), 3.56x (B.1.351 aka Beta), 4.24x (P.1 aka Gamma).	B.1.1.529, BA.1, BA.2	Gong et al. (2021)	862	T	1.0
p.N501Y	ACE2 receptor binding affinity	RBD containing the N501Y mutation results in 9-fold stronger binding to the hACE2 receptor than wild type RBD. The E484K mutation does not significantly influence the affinity for the receptor, while K417N attenuates affinity. As a result, RBD from B.1.351 containing all three mutations binds 3-fold stronger to hACE2 than wild type RBD but 3-fold weaker than N501Y.	B.1.1.529, BA.1, BA.2	Laffeber et al. (2021)	862	T	1.0
p.N501Y	ACE2 receptor binding affinity	Reported 10-fold increase in ACE2 binding vs wildtype (Kd)	B.1.1.529, BA.1, BA.2	Liu et al. (2021)	862	T	1.0
p.N501Y	ACE2 receptor binding affinity	Studying the key covariants in lineage of concern 501Y.V2, observed about 2-fold increase in ACE2 binding vs wildtype, but greatly decreased mAb binding, suggesting evolutionary optimum tension between immune evasion and ACE2 binding affinity as the N501Y variant alone has 10x increase in affinity but no effect on tested mAb binding.	B.1.1.529, BA.1, BA.2	Liu et al. (2021)	862	T	1.0
p.N501Y	ACE2 receptor binding affinity	extasciitilde4-fold increase in binding affinity vs wild type.	B.1.1.529, BA.1, BA.2	Motozono et al. (2021)	862	T	1.0
p.N501Y	ACE2 receptor binding affinity	Using Microscale Thermophoresis, this variant binds ACE2 at nearly two-fold greater affinity than the original SARS-COV-2 RBD (203.7 nM vs 402.5 nM).	B.1.1.529, BA.1, BA.2	Ramanathan et al. (2021)	862	T	1.0
p.N501Y	ACE2 receptor binding affinity	Using Mircoscale Thermophoresis, the B.1.351 variant harboring three mutations, binds ACE2 at nearly five-fold greater affinity than the original SARS-COV-2 RBD (Kd 87.6, vs 402.5 nM).	B.1.1.529, BA.1, BA.2	Ramanathan et al. (2021)	862	T	1.0

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.N501Y	ACE2 receptor binding affinity	In silico methods (PyMOL and PDBePISA) involving mutagenesis (N501Y mutation) and interface analysis focusing on the Spike RDB-ACE2 interaction showed that the SARS-CoV-2 N501Y mutant (lineage B.1.1.7) establishes a more significant number of interactions relating to the mutant residue Y501 (Spike RDB) with residues Y41 and K353 (ACE2). This finding shows that the increased infectivity of SARS-CoV-2 lineage B.1.1.7 is associated with the interaction force between the Spike RBD Y501 mutant residue with the ACE2 receptor, which in this strain is increased.	B.1.1.529, BA.1, BA.2	Santos and Passos (2021)	862	T	1.0
p.N501Y	ACE2 receptor binding affinity	Experimentally, ACE2 binding affinity increased 0.24 fold	B.1.1.529, BA.1, BA.2	Starr et al. (2020)	862	T	1.0
p.N501Y	ACE2 receptor binding affinity	This single mutation causes major increase in binding affinity vs. wild type as measured by IC50 vs pseudotyped lentivirus, but combined with the complete set of B.1.1.7 lineage variants no major change vs wild type affinity is observed.	B.1.1.529, BA.1, BA.2	Tada et al. (2021)	862	T	1.0
p.N501Y	ACE2 receptor binding affinity	This mutation combination causes major increase in binding affinity vs. wild type as measured by IC50 vs pseudotyped lentivirus, but combined with the complete set of B.1.1.7 lineage variants no major change vs wild type affinity is observed.	BA.1	Tada et al. (2021)	860	T	1.0
p.N501Y	ACE2 receptor binding affinity	Reported 4-fold increase in affinity compared to wild-type RBD on the cell surface (Kd)	B.1.1.529, BA.1, BA.2	Tian et al. (2021)	862	T	1.0
p.N501Y	ACE2 receptor binding affinity	Reported slight increase in affinity compared to wild-type RBD on the cell surface (Kd)	B.1.1.529, BA.1, BA.2	Tian et al. (2021)	862	T	1.0
p.N501Y	ACE2 receptor binding affinity	The affinity of ACE2 for this mutation combination was twice as high as for wild type. Having in mind that the affinity of SARS-CoV-2 for ACE2 is only 4-fold higher compared to SARS-CoV-1, this factor of 2 is expected to be biologically significant.	B.1.1.529, BA.1, BA.2	Vogel et al. (2021)	862	T	1.0
p.N501Y	ACE2 receptor binding affinity	Among the first selected and fixed variants in an in vitro evolution experiment for ACE2 binding. Calculated dissociation constant for this variant is nearly four fold lower than wild type (Kd)	B.1.1.529, BA.1, BA.2	Zahradnik et al. (2021)	862	T	1.0
p.N501Y	ACE2 receptor binding affinity	N501Y residue inserts into a cavity at the binding interface near Y41 of ACE2. The additional interactions result in increased affinity of ACE2 for the N501Y mutant, accounting for its increased infectivity.	B.1.1.529, BA.1, BA.2	Zhu et al. (2021)	862	T	1.0

p.N501Y	trafficking	Lentiviral pseudotyped with this individual mutation from B.1.1.7 was tested on ACE2.293T cells. Luciferase activity was measured two days postinfection, showing slightly increased infection rate amongst the cells. [in what is essentially a replicate experiment in the same paper, because each B.1.351 lineage variant was independently evaluated and N501 is in both lineages, a significant decrease was observed, therefore the error bars described in this paper should be interpreted carefully]	B.1.1.529, BA.1, BA.2	Tada et al. (2021)	862	T	1.0
p.N501Y	trafficking	Lentiviral pseudotyped with this mutation set from B.1.1.7 was tested on ACE2.293T cells. Luciferase activity was measured two days postinfection, showing significant (40%) increase in infection rate amongst the cells, much more than the effect of either the deletion or the point mutation alone, suggesting that this combination has a synergistic effect contributing to cell entry fitness, more so than this combination with the addition of P681H.	BA.1	Tada et al. (2021)	860	T	1.0
p.N501Y	trafficking	Lentiviral pseudotyped with this mutation set from B.1.1.7 was tested on ACE2.293T cells. Luciferase activity was measured two days postinfection, showing significant (40%) increase in infection rate amongst the cells, much more than the effect of either the deletion or the point mutation alone, suggesting that this combination has a synergistic effect contributing to cell entry fitness, but to a smaller extent than N501Y and the deletion alone.	BA.1	Tada et al. (2021)	860	T	1.0
p.N501Y	vaccine neutralization efficacy	Observed 1.3-fold reduction in neutralization efficiency of Pfizer vaccinee sera (collected 14 days after second dose) against pseudotype B.1.1.7 key variant lentivirus. Compare to 2.6-fold reduction against cultured B.1.1.7 virus.	B.1.1.529, BA.1, BA.2	Bates et al. (2021)	862	T	1.0

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.N501Y	vaccine neutralization efficacy	1.2x drop in neutralization using sera collected from 14 healthy adult participants that received two injections of the mRNA-1273 (Moderna) vaccine at a dose of 100 µg (18-55 years: day 1 and day 14 post-2nd dose) against a recombinant single variant virus (modified replicating WA-1 cDNA clone) relative to contemporary circulating D614G variant (USA/GA-EHC-083E/2020) using a live-virus Focus Reduction Neutralization Test (FRNT) assay.	B.1.1.529, BA.1, BA.2	Edara et al. (2021)	862	T	1.0
p.N501Y	vaccine neutralization efficacy	The presence of this variant in 189 post-mRNA-vaccination COVID-19 cases was proportionally in line with lineage prevalence in Northern California during the study period, suggesting no effect of these variants on immune escape.	B.1.1.529, BA.1, BA.2	Jacobson et al. (2021)	862	T	1.0
p.N501Y	vaccine neutralization efficacy	This variant showed no change in Pfizer sera (one or two dose) neutralization efficiency vs D614G (using lentivirus pseudotype).	B.1.1.529, BA.1, BA.2	Kuzmina et al. (2021)	862	T	1.0
p.N501Y	vaccine neutralization efficacy	This variant showed >5x decrease in Pfizer sera (3 weeks post-first dose: n	B.1.1.529, BA.1, BA.2	Kuzmina et al. (2021)	862	T	1.0
p.N501Y	vaccine neutralization efficacy	Human sera from 6 two-dose Pfizer vaccinated individuals (47-68 days post 1st-dose) can neutralize both the reference USA-WA1/2020 strain and the mouse adapted SARS-CoV-2 strain that contains the N501Y spike mutation with similar efficiency. p.P681H	trafficking	While the introduction of P681H in the SARS-CoV-2 B.1.1.7 variant may increase spike cleavage by furin-like proteases, this does not significantly impact viral entry or cell-cell spread. We consider that other factors are at play to account for the increased in transmission and disease severity attributed to this variant of concern (VOC).	B.1.1.529, BA.1	Lubinski et al. (2021)	858	A	1.0

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.P681H	trafficking	This mutation in the first base of the furin cleavage site maintains the RXXR recognition motif, and is presumed to enhance cleavage based on the removal of a proline-directed phosphatase recognition site at S680. In a homologous site in Infectious Bronchitis Virus (IBV, Gamma-coronaviruses), abolition of S680 phosphorylation improves furin cleavage (and presumably cell entry).	B.1.1.529, BA.1	Maaroufi (2021)	858	A	1.0
p.P681H	trafficking	Lentiviral pseudotyped with this individual mutation from B.1.1.7 was tested on ACE2.293T cells. Luciferase activity was measured two days postinfection, showing NO statistically significant infection rate change amongst the cells, suggesting that furin cleavage typically used for cell entry is not affected by this change one amino acid upstream of the RXXR recognition pattern.	B.1.1.529, BA.1	Tada et al. (2021)	858	A	1.0
p.P681H	trafficking	Lentiviral pseudotyped with this mutation set from B.1.1.7 was tested on ACE2.293T cells. Luciferase activity was measured two days postinfection, showing significant (40%) increase in infection rate amongst the cells, much more than the effect of either the deletion or the point mutation alone, suggesting that this combination has a synergistic effect contributing to cell entry fitness, but to a smaller extent than N501Y and the deletion alone.	BA.1	Tada et al. (2021)	857	A	1.0
p.P681H	vaccine neutralization efficacy	No significant change in virus neutralization by 18 Pfizer two dose vaccine sera compared to B.1.1.7. [results without including the used mutation A27S likely generalizable, as this is not a lineage defining mutation]	B.1.1.529, BA.1	Zuckerman et al. (2021)	858	A	1.0
p.P681H	vaccinee plasma binding	1.14x decrease in Spike binding (relative to D614G alone) by 5 plasma collected 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in previously non-seroconverted subjects. 1.11x decrease in Spike binding (relative to D614G alone) by 5 plasma collected 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in post-infection vaccinees.	B.1.1.529, BA.1	Gong et al. (2021)	858	A	1.0

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.P681H	virion structure	The Ratio of S2 (processed Spike) to full length Spike is higher for this mutation, due to a drop in the full length Spike measured, suggesting that this mutation compensates for decreased Spike production by improved proteolytic processing.	B.1.1.529, BA.1	Tada et al. (2021)	858	A	1.0
p.P681H	virion structure	The Ratio of S2 (processed Spike) to full length Spike is higher for this mutation combination, due to a drop in the full length Spike measured, suggesting that this mutation compensates for decreased Spike production by improved proteolytic processing.	BA.1	Tada et al. (2021)	857	A	1.0
p.G339D	ACE2 receptor binding affinity	Experimentally, ACE2 binding affinity increased 0.06 fold	B.1.1.529, BA.1, BA.2	Starr et al. (2020)	863	A	1.0
p.G339D	gene expression increase	Experimentally, Spike gene expression increased 0.3 fold	B.1.1.529, BA.1, BA.2	Starr et al. (2020)	863	A	1.0
p.H655Y	ACE2 receptor binding affinity	Using flow cytometry and ACE2 ectodomains-Fc portion IgG complex, this variant showed a 1.21x increase in binding (KD) relative to D614G.	B.1.1.529, BA.1, BA.2	Gong et al. (2021)	862	T	1.0
p.H655Y	anthropozoonotic events	Six minks were intranasally infected with WA1 isolate, all developed this mutation during infection.	B.1.1.529, BA.1, BA.2	Esclera et al. (2021)	862	T	1.0
p.H655Y	convalescent plasma binding	1.48x increase in Spike binding (relative to D614G alone) by 5 plasma collected 8 months post-symptom-onset.	B.1.1.529, BA.1, BA.2	Gong et al. (2021)	862	T	1.0
p.H655Y	homoplasmy	In experimental models of SARS-CoV-2 mutational evolution (without immune pressure), this mutation in the N terminal domain appears convergent.	B.1.1.529, BA.1, BA.2	Borges et al. (2021)	862	T	1.0
p.H655Y	vaccinee plasma binding	1.04x increase in Spike binding (relative to D614G alone) by 5 plasma collected 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in previously non-seroconverted subjects. 1.09x decrease in Spike binding (relative to D614G alone) by 5 plasma collected 3 weeks after one dose of Pfizer/BioNtech BNT162b2 vaccine in post-infection vaccinees.	B.1.1.529, BA.1, BA.2	Gong et al. (2021)	862	T	1.0
p.H655Y	virion structure	Estimated free energy change (ddG) for this variant is 0.87 kcal/mol (i.e. stabilizing relative to wild type)	B.1.1.529, BA.1, BA.2	Spratt et al. (2021)	862	T	1.0
p.N440K	ACE2 receptor binding affinity	Experimentally, ACE2 binding affinity increased 0.07 fold	B.1.1.529, BA.1, BA.2	Starr et al. (2020)	749	G	1.0
p.N440K	antibody epitope effects	N501Y substitution decreased the neutralizing and binding activities of CB6 and increased that of BD-23	B.1.1.529, BA.1, BA.2	Cheng et al. (2021)	749	G	1.0

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.N440K	antibody epitope effects	Ablates binding by class 3 mAbs such as C135 that do not directly interfere with ACE2 binding, but clonal somatic mutations of memory B cells at 6.2 months (evolving humoral immune response) show pronounced increase in binding to the variant.	B.1.1.529, BA.1, BA.2	Gaebler et al. (2021)	749	G	1.0
p.N440K	antibody epitope effects	Greater than 10-fold reduction of binding efficiency vs wild type for mAb LY-CoV555. Abolishes binding of mAb ADG-1.	B.1.1.529, BA.1, BA.2	Rappazzo et al. (2021)	749	G	1.0
p.N440K	antibody epitope effects	Resistant to class 3 antibodies (i.e. Abs that do not directly interfere with ACE2 binding).	B.1.1.529, BA.1, BA.2	Wang et al. (2021)	749	G	1.0
p.N440K	monoclonal antibody serial passage escape	Class 3 antibody C669 mildly selected for the emergence of the N440K mutation in vitro (in contrast to N440H which caused mild escape in Class 1/2 mAb C653).	B.1.1.529, BA.1, BA.2	Wang et al. (2021)	749	G	1.0
p.N440K	monoclonal antibody serial passage escape	Positive selection (up to 45% of supernatant sequences) under two rounds of C135 monoclonal antibody passage, eliminated in subsequent passages	B.1.1.529, BA.1, BA.2	Weisblum et al. (2020)	749	G	1.0
p.N440K	reinfection	A 47yo Indian male was reinfectd with B.1.36 lineage virus in September 2020 after infection with genetically distinct B.1.36 virus in July, with negative PCR tests in between. While the first episode was asymptomatic, the second included fever, cough, and malaise. The second case additionally contained stopgain ORF3a:E261*	B.1.1.529, BA.1, BA.2	Rani et al. (2021)	749	G	1.0
p.N440K	transmissibility	The N440K variant produced ten times higher infectious viral titers than a prevalent A2a strain, and over 1000 folds higher titers than a much less prevalent A3i strain prototype in Caco2 cells. Interestingly, A3i strain showed the highest viral RNA levels, but the lowest infectious titers in the culture supernatants, indicating the absence of correlation between the RNA content and the infectivity of the sample.	B.1.1.529, BA.1, BA.2	Tandel et al. (2021)	749	G	1.0
p.R346K	gene expression increase	Experimentally, Spike gene expression increased 0.12 fold	B.1.1.529, BA.1	Starr et al. (2020)	860	A	0.29
p.R346K	monoclonal antibody serial passage escape	Strong positive selection (up to 53% of supernatant sequences) under two rounds of C135 monoclonal antibody passage, overall 70% switch away from R346 to S, K or M	B.1.1.529, BA.1	Weisblum et al. (2020)	860	A	0.29
p.G142D	monoclonal antibody serial passage escape	Escape mutation against Spike N terminal domain antigenic supersite i mAbs S2M28, S2X28, S2X333	B.1.1.529, BA.2	McCallum et al. (2021)	2	A	1.0

Mutations	Sub-category	Function	Lineages	Citation	Sequence Depth	Alternate Allele	Alternate Frequency
p.G142D	monoclonal anti-body serial passage escape	Selected twice in passage with mAb COV2-2489.	B.1.1.529, BA.2	Suryadevara et al. (2021)	2	A	1.0
